

THIS IS MAGVENTURE

MagVenture is a market-leading manufacturer of non-invasive Transcranial Magnetic Stimulation (TMS) systems. Privately-owned and headquartered in Denmark, MagVenture has been pioneering cutting edge TMS solutions for more than 30 years. MagVenture's TMS systems are used for a wide range of applications in both research and treatment in the fields of psychiatry, neurophysiology, neurology, cognitive neuroscience, and rehabilitation.

MagVenture's vision is to offer new hope to patients by transforming how mental health and physical conditions are treated.

Our mission is to pioneer safe, effective, and reliable magnetic stimulation therapies, offer innovative and versatile research solutions and work to expand access to magnetic stimulation worldwide. MagVenture's products are available on the global market through direct sales subsidiaries in the USA, Germany, the UK, and Brazil, and through a global network of distributors.

MagVenture TMS Therapy

Stimulating mental health.

DO YOU HAVE PATIENTS NOT RESPONDING TO ANTIDEPRESSANTS?

MagVenture TMS Therapy could be the solution.

*Indications for use

MagVenture TMS Therapy® is CE approved for: "Treatment of Major Depressive Disorder in adult patients who have failed to achieve satisfactory improvement from two prior antidepressant medications, at or above the minimal effective dose and duration in the current episode."

How to get started

All you need besides the TMS equipment is a dedicated treatment room and trained personnel. We will help you with everything from selecting the right system for your needs, as well as full installation and training of you and any staff you might have.

Let's help you, help your patients!

To find out more, please contact us at info@magventure.com

✓ Non-invasive, no anesthesia

✓ CE approved

✓ Excellent response and remission rates

✓ Outpatient procedure

WHAT IS TRANSCRANIAL MAGNETIC STIMULATION (TMS)

TMS is indicated for use in people with major depressive disorder who have not responded to antidepressant medication.* TMS has been recommended by the American Psychiatric Association since 2010. In 2015, the Institute of Health and Care Excellence (NICE) in the UK assessed the safety and efficacy of TMS for depression and published guidance on the procedure.

MagVenture TMS Therapy consists of repeated cycles of TMS followed by rest periods. Diagnosis and initial session is performed by a licensed physician. The remaining treatment sessions will typically be conducted by trained staff under the supervision of

the physician. TMS is non-invasive, does not require any anesthesia and is not to be confused with Electroconvulsive Therapy (ECT). People can immediately get back to their usual activities.

The efficacy of TMS

Efficacy of TMS¹
Failure of 2 or more antidepressants

Efficacy of antidepressants²
Failure of 2 antidepressants

1 Blumberger et al. 2018, The Lancet
2 Rush et al. 2006, Am J Psychiatry

During treatment, magnetic pulses are delivered through a magnetic coil to stimulate nerve cells in the part of the brain controlling the mood.

Repeated stimulation of this area of the brain can have an antidepressant effect on people suffering from major depressive disorder.

TMS in short

- An alternative to antidepressants
- Series of pulsed magnetic stimuli to the brain
- CE approved* for the treatment of major depressive disorder
- Non-invasive treatment – no anesthesia
- Free from common antidepressant drug side effects such as weight gain, dry mouth, and sexual dysfunction
- Most common side effects from TMS are headache and nausea
- Does not negatively affect cognitive function
- May be used with or without antidepressants (determined by physician)
- For use in outpatient settings

Cautions:
TMS treatment may not be effective or appropriate for all your patients.

Even though TMS has very few side effects compared to antidepressants, additional side effects may occur. Treatment should only be carried out by licensed physicians or educated technicians supervised by physicians.

Please consult MagVenture and relevant scientific literature to learn more about the treatment and any potential risks.

MAGVENTURE TMS THERAPY: THE BENEFITS

Depending on your situation and how many patients you expect to treat per day, we have the right solution for you. We provide treatment solutions from entry-level – with smaller systems ideal for start-up or small clinics – as well as more advanced high-performance solutions suited for a very high patient throughput

Providing safe treatment solutions which are highly effective and comfortable for the patient, as well as reliable and easy to use for you as a healthcare practitioner, is a key priority for MagVenture.

The MagVenture TMS Therapy system comes with a range of features to provide optimal patient comfort, including a fully adjustable chair and neck support as well as the lowest noise level³.

Our system is upgradable for possible future treatment protocols and with our add-on patient management system, developed in accordance with major data safety regulations, you can spend more time on your patients and less time on administration.

Affordable financing options and marketing support will get you started and help ensure a fast return on your investment.

5 reasons to choose MagVenture TMS Therapy

- 1 Proven treatment efficacy, usability, and quality
- 2 High patient throughput
- 3 Simple setup, including pre-defined treatment protocols
- 4 System setups for any practice size
- 5 Represented in 60+ countries, providing onsite installation, training of staff, and ongoing technical support.
